2. Setelah membuat model, buat controller baru dengan cara yang sama yaitu klik kanan pada folder controller kemudian simpan dengan nama Belajar.php dan tekan tombol ctrl+shift+p dan cari controller dan tekan enter, dan samakan juga nama class dengan nama file controller kemudian buat function baru dengan nama mahasiswa(). Kemudian didalam function, load model dengan cara \$this->load->model('namamodel'), kemudian ambil data dengan cara \$this->namamodel->namafunctionmodel, dan load viewnya dengan cara \$this->load->view('namaview',\$datayangakandikirimkeview).

```
| Clear plant | Control |
```

3. Selanjutnya, buat view di folder view. Kemudian tampilkan data yang telah dikirim lewat controller dengan mengetikkan echo kemudian nama variable yang sesuai dengan yang ada didalam array model.

4. Selanjutnya buka di browser. Jangan lupa menyalakan XAMPP. cara mengaksesnya adalah localhost/namafolder/index.php/namacontroller/namafunctioncontroller.
